

Science NCEA L1 Sample Course Outline 2 - guide to aid teacher planning

Introduction to this teaching and learning programme

This programme begins with the student and over the year expands its focus to encompass factors that might affect the student, how the student might interact with their environment, and then looks towards the student's future. It is designed to allow multiple 'strands' of science to be included in each contextual level of the programme, and also allows for multiple opportunities to weave these conceptual elements into the Nature of Science framework.

| | | | | | |
|--|-----------------------|--|------------------------|---|---|
| | Learning Focus | Significant learning comes by weaving together the ways of working and the “content” ideas (the Big ideas about and of Science) | | Throughout the year assessment for learning happens often and evidence may be collated for summative assessment. | |
| | | Working scientifically | Knowledge ideas | Possible Learning Activities | Suggested Assessment Opportunities |

This example teaching and learning programme sequence provides a range of opportunities for teachers and/or students to select from. Students would not be expected to engage in all possible activities within one year. The four sections below might not equate to a term, as teachers could spend a longer/shorter time on aspects as appropriate to their class.

X weeks

My future

- New materials
- Health technologies
- Transport
- Energy production
- Ways to mitigate climate change (solutions focused)

Investigating:

Use a range of investigations to investigate new science-based solutions, materials and technologies

Engaging:

Identifying and exploring local socio-scientific issues related to new science-based solutions, materials and technologies

Human Endeavour:

Explore how scientists and mātauranga practitioners are developing new science-based solutions, materials and technologies

Communicating:

Examine science claims made about new science-based solutions, materials and technologies

Wave motion transfers energy without transferring matter.

Forces acting at a distance are explained in terms of fields.

Properties of substances observable at the macroscopic level can be explained by, but are different from, the structures of atoms and molecules and the interactions between them.

Rearrangements of matter (chemical reactions) can be observed at the macroscopic level and involve changes at the atomic and sub-atomic level.

The total amount of matter remains the same in chemical reactions.

The distribution of heat energy within the Earth system is dynamic, and this is affected by human activity.

Changes in one sphere can cause changes to other spheres, often in

- Investigating claims of biodegradable plastics
['Biodegradable' plastic bags often don't break down](#)
- Exploring the [development of nanotechnology](#) and
 - [Nanoscience – introduction](#)
- Exploring how superconductors were developed
- “superhuman” technologies - bionics, [growing organs](#) and
 - [Hui aims to raise rate of Māori organ transplants](#)
 - [Fashioning inks to 'print' tissues](#)
 - [Impact of biotechnology on society](#)
- [Future energy sources](#) - how are these produced, what are the possibilities and the current limitations:
 - hydrogen power
 - wave/tidal power
 - solar power
 - battery technology
- [Explore the development of 5G](#)
- Future climate change mitigations such as:
 - limiting populations
 - transport limitations
 - carbon sinks
- Explore any of a number of chemical discoveries made in Aotearoa - useful resource here: [Scientific Sleuthing](#)
- Create a unique product from blending traditional Māori and new techniques - see ideas here:

Multiple opportunities for formative assessment, which could include:

1.1 Investigating:

- Biodegradable plastics
- Create a new product

1.2 Engaging:

- “superhuman” technologies
- growing organs and tissues
- Solutions and mitigations to climate change

1.3 Human Endeavour:

- Development of nanotechnology
- Development of superconductors
- Development of 5G technology

1.4 Communicating:

- Claims of future energy sources
- Claims around 5G technology
- Representations of waves
- Representation of particles

Late Term 4, summative assessment of AS 1.4 Communicating (external)

unexpected and complex ways.

Assessment Matrix

| AS | Title | Int/Ext Credits | Assessment Type and Date | Assessment Elements |
|-----|---|-----------------------|---|--|
| 1.1 | Use a range of scientific investigative approaches | Internal 5 credits | Collection of three investigative approaches completed and a comparison of the these approaches. By the end of T3. | Collection of three different approaches across the year from investigations listed above, which include: <ul style="list-style-type: none"> ● pattern seeking ● exploring and observing ● modelling ● classifying and identifying ● fair testing |
| 1.2 | Engage with a local socio-scientific issue | Internal 5 credits | Present evidence that <ul style="list-style-type: none"> - explains the relevant science ideas - describes perspectives on the issue - proposes and explains a response - links the ideas or perspectives and the response. By the end of Term 3 | Choose ONE of the following issues: <ul style="list-style-type: none"> ● Organ donation ● Pushing the boundaries in sports (TASK) ● Meat consumption & a balanced diet? Water cost of this? ● Geothermal energy as a local issue ('Te Pūngao Puia' TASK) ● Impact of fossil fuel use ● Pest-free 2050 as an issue ● Human impact on biodiversity |
| 1.3 | Describe features of science that contribute to the development of scientific ideas and processes | External 5 credits | Common assessment activity - task set and marked by NZQA and sat individually under examination conditions End of Term 2 | Practice activities in describing features of science that contribute to the development of scientific ideas and processes within: <ul style="list-style-type: none"> ● Microscope development ● Development of performance and safety materials and equipments ● Traditional ways of cooking ● Development of insulation in housing ● Development of renewable energy technologies |

| | | | | |
|-----|---|-----------------------|---|---|
| 1.4 | Interpret scientific claims in communicated information | External 5 credits | Common assessment task - NZQA assessment task under examination conditions End of Term 4 | Practice activities in interpreting scientific claims made in communicated information about: <ul style="list-style-type: none"> ● DNA, cells, tissues & organ systems ● Physical fitness and movement ● Nutrition ● Performance & Safety equipment ● Food and Water supply ● Heat and Fuels ● Ecosystems, biodiversity and human impact on these ● New materials ● Health technologies ● Transport ● Energy production ● Ways to mitigate climate change |
|-----|---|-----------------------|---|---|
